Get this from a library! An experimental study of the genus Bidens (Asteraceae) in the Hawaiian Islands,. [George W Gillett; Elvera K S Lim]. Hawaiian Bidens have sterile "ray" flowers, miles (17 km) west of Manawainui Stream. Dry so that only the "disc" flowers are involved in land vegetation including Euphorbia and asso- producing achenes. In a given plant, the "disc" ciated weeds. About m from the sea, elev. flowers may be bisexual or unisexual (female). 60 m. IN HAWAIIAN TETRAMOLOPIUM (COMPOSITAE: ASTERACEAE) Tim K. Lowrey Department of Botany University of California at Berkeley Berkeley, California Recent field and experimental studies of Hawaiian plants have contributed a wealth of informatioh concerning evolutionary histories and diversity of insular species in the tropical Pacific.

THE EXPERIMENTAL VERIFICATION OF NATURAL HYBRIDIZATION BETWEEN TWO TAXA OF HAWAIIAN BIDENS (ASTERACEAE) Jo ANNE MENSCH AND GEORGE W. GILLETT 1'2 Mensch, Jo Anne & G. W. Gillett (Department of Biology, University of Califor- nia, Riverside). The experimental verification of natural hybridization between two taxa of Hawaiian Bidens (Asteraceae). Brittonia .

A crossing program was carried out between the Kauai endemic *B. forbesii* and six other Polynesian species, five of which are Hawaiian and one Marquesan. All crosses produced vigorous F 1 hybrids, portraying a strong genetic relationship between *B. forbesii* and the other species.
